

Introducing the Switch Back M8RX Personal Interface from Hear Technologies

A preamp and multi-channel headphone monitoring interface

Dec 13, 2017

Huntsville, AL – Hear Technologies has added a new pro audio tool to its lineup. With many capabilities and an intuitive design, the Switch Back M8RX is actually two products in one. This gives the individual a choice to play live, record, or monitor their mix all in one single tool.

M8RX is a personal interface to be used for live sound or recording, and a multi-channel headphone monitoring system. Compact in size to fit any situation, the M8RX gives individuals choices to use it in multiple ways like having mini recording studio setup, or a simple communication system.

Our engineers created the sleek compact look and feel of the M8RX to give individuals the option of hanging it from a belt, mounting it on a mic stand, or setting it on a table. Hear Technologies will be manufacturing the M8RX in the U.S. to make sure our customers get the quality they have come to expect.

Key Features and Functions

The research and design Hear Technologies put into the M8RX is what sets it apart. M8RX has a total of eight channels of audio mixing – two studio-quality microphone preamps, two channel line-inputs, and four Dante network audio inputs/outputs.

M8RX's two mic preamps have a distortion spec below 0.001% along with zero-latency analog mixing and monitoring of the four analog inputs. With Ethernet capability becoming standard in most pro audio gear today, M8RX includes a total of four channels of Dante network audio inputs/outputs.

Along with the same high quality headphone amplifier that's in the Hear Back PRO system, the M8RX has 5 watts of headphone power and can be directly connected to a computer via the Ethernet port. The unit uses PoE power over the same Cat5e cable as the Ethernet.

About Hear Technologies

Hear Technologies is the pro audio product division of [Quantum Technologies Inc.](#), a world leader in custom audio/video systems. Hear Technologies offers a unique and affordable solution for personal and professional systems, and is headquartered in Huntsville, AL. For more information visit www.HearTechnologies.com.
